REMARKS

In view of the Examiner's comments on page 2 of the Final Rejection, claim 47 has been amended to <u>explicitly</u> recite the feature that the host computer can be dynamically and continuously interfaced with the fan(s). Attention is directed to the arguments made on pages 4-10 of the amendment of 23 AUG. 2002. Reconsideration is solicited.

Respectfully submitted,

Milton Oliver

2

47. (Amended)   The fan system of claim 42, in which the microcontroller (12) controls the commutation of said electric motor (10) and the transfer of fan control information between said writeable memory (14) and said host computer (11), whereby said host computer is capable of being dynamically and continuously interfaced with the fan.
